## **Continuation Sheet (PTO-303)**

Application No.

Regarding applicant's argument on pages 2 and 3, filed 7/13/11 that Hansen teaches only the ability to designate paper size and special paper color, but does not teach rules associated with such capabilities, examiner disagrees. Column 18, lines 51-53 clearly teaches that for any particular capability request (i.e. size of paper stock and special paper color), an automatic policy can be in place to deal with such capabilities (i.e. ignoring the special attribute when not available as in column 18, line 55, or a policy to always satisfy a capability requirement as in column 18, line 57). Therefore, since a paper size designation (column 17, line 59) and a special color designation (column 16, lines 61-62) are clearly taught as capabilities (i.e. potential attributes of a job), these capabilities can be subject to the "rules" (i.e. policies) defined in column 18, as previously stated. That is to say, since any printing device accessible in the network of Hansen could lack a specific capability to implement a preferred attribute, the "policies" of column 18 are in place to deal with such situations, thereby teaching "rules" for all attributes that are possible to be included in the job ticket (i.e. workflow), and since Hansen teaches the attributes (as admitted by applicant in page 2 of the arguments) the "rules" for such attributes are also taught. Therefore the current argument is overcome and the rejection stands.
